## Saving and sending images for publication

Do not embed images in a Word document, send them separately as noted below.

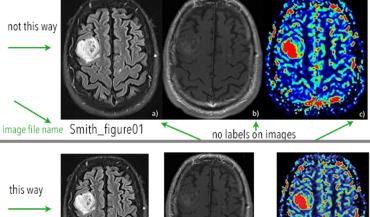

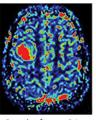

image file name Smith\_figure01a

Smith\_figure01b

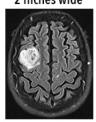

Smith\_figure01c

## Images here are not to scale but just for demonstration

too small for print (will be blurry or pixelated when enlarged for placement)

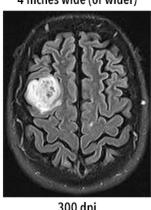

## 2 inches wide

72 dpi (dots per inch)

large enough for print (plenty of pixels [dots, data] in the image

## 4 inches wide (or wider)

300 dpi (dots per inch)

Merely enlarging an image in an editing program does not create more data (pixels, dots). The original image needs to contain as much data as possible.

If taking a screen shot, make the image as big as possible on the screen before capturing.

If sending a diagram or chart, send the original file (PowerPoint or other program) so it can be converted.
