Dear Customers,

Mitsubishi Electric Sales Canada's President, Mr. Takeshi Terada, awarded Enertrak's management team a recognition award for achieving the highest sales per capita & for the exceptional growth of City Multi VRF sales in Eastern Canada. It is a pleasure for me to share this distinction with our business partners, engineering consulting firms, mechanical contractors, institutions and real-estate developers who show us their confidence and embellish our cities with their projects.

Roger Nasrallah, Brad Matheson, Karine Trak, Vic Epifani, Takeshi Terada, Ada Trak, Daniel Giroux, Sam Trak and Marc Naccache

Twenty years ago, the Enertrak team, which masters perfectly the variable refrigerant flow technology (VRF) revolutionized the HVAC market by introducing this new technology in 1999 with the installation of the first Mitsubishi Electric City Multi VRF system in North America in Quebec. This still functional system guarantees the reliability of Mitsubishi Electric systems and the expertise of the Enertrak team. With more than 2,800 VRF projects implemented by our 21 mechanical engineers, 15 technologists and 8 refrigeration technicians dedicated to technical support, we define the ecosystem of an ideal partnership to move your designs / projects from concept to reality.

At the dawn of a new decade, we continue to guide the HVAC market while applying our corporate philosophy, namely the expertise of implementing Mitsubishi Electric's planetary innovations such as Ecodan Aerothermal, the E Series modular chiller/Heat Pump, Hybrid VRF Hybrid and City Multi NextGen.

This exclusive relationship with Mitsubishi Electric Canada will define the next chapter of the VRF revolution and together we will ensure that the best is yet to come!

Regards,

Sam Trak, P.Eng.
